

ON-IT INSTALLATION SERVICES

On-It Installation Services from Grande Vitesse Systems Inc., is a comprehensive desktop installation service that quickly gets your system up and running all for one fixed fee. With On-IT, you receive a desktop environment that's custom installed and configured to meet your application needs, precisely.

On-IT is ideal for new system start-ups, whether you have UNIX experience or not. You simply acquire GVS's in-depth start-up expertise to accomplish your one-shot set-up•saving internal resources for more crucial IT tasks.

With On-IT, GVS experts tackle the system administration and installation tasks for you to bring up a desktop customized to your daily application requirements. Beyond smooth system start-up, On-IT also saves you significant time and resources. That's because On-IT moves you to a complete customized, fully functional system in a minimal amount of time. With On-IT, from day one, you are able to focus on your work instead of your computer. Start up your new system with On-IT's flexible features:

Hardware integration

GVS will first verify your hardware functionality, including every component required to configure and install the system. We'll then integrate all hardware components into a complete system, including system disks and peripherals.

Custom Disk Configuration

GVS will partition the operating system and disk(s) according to your system requirements including current applications, number of users, and what the system is going to be used for. Such customized configuration saves you time and resources in future configurations.

Custom installation /configuration of Server OS

GVS will load the operating system and configure it as a standalone system or as a network client. When setup correctly from day one, both system administrators and users will benefit from significant savings in time and effort.

Desktop implementation

With DeskStart, you can count on a fully functional, correctly configured windowing environment.

Built-in expansion flexibility

On-IT sets up multiuser environment according to your needs with everything from having the opportunity

to log in and have windowing sessions initiate automatically to making your applications accessible through the menus of the windowing environment, if applications permit.

Personalized tutorial

Once your desktop environment is fully installed, a GVS engineer will hold a one-on-one personalized tutorial with your system administrator. All operations will be covered from powering up the system and shutting it down to system administration, handling PROM utilities, or adding on new users. This complete tutorial will equip your system administrator with the knowledge required to manage the new environment.

Load GVS unbundled software

Under the On-IT Plus service, GVS will load up to three Basic applications onto your system disk. In this case, applications covered include any Sun unbundled software not available on the Solaris CD.
